EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew St. Clair on March 12, 2009.

The application has been amended as follows:

Claim 1, at the end of the claim, delete the period and insert --wherein a biasing member for biasing the connecting member toward the connected position is provided in the container potion for the rear rotor, and wherein the connection releasing member is engaged by the connecting member and receives a biasing force from the biasing member such that the connecting member is engaged with the cutout portion and wherein the connection releasing member is held in a lock recess formed on an inner circumferential surface of the holder when the connecting member is in the connected position. --

Claim 2, delete.

Claim 8, delete.

Claim 11, at the end of the claim, delete the period and insert --wherein a biasing member for biasing the connecting member toward the connected position is provided in the container potion for the rear rotor, and wherein the connection releasing member is engaged by the connecting member and receives a biasing force from the biasing

member such that the connecting member is engaged with the cylinder, and wherein the connection releasing member is held in a lock recess formed on an inner circumferential surface of the holder when the connecting member is in the connected position. —

Claim 12, delete.

Claim 18, delete.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: Applicant's concept of a connection releasing member position on an outer circumference of the connecting member moveable in a hole of the sleeve where the connecting member is biased in the container portion of the rotor wherein the connection releasing member is engaged by the connecting member and is held in a lock recess formed on the inner circumferential surface of the holder is novel over the prior art. Although the prior art shows some freewheeling cylinders and detachable rotors, the prior art does not show the releasing member/connecting member engagement as claimed. Particularly US 6058751 shows a similar detent mechanism but the inventive concept of that patent is the lack of a spring for the detent. Applicant's invention requires a biasing force for the detent mechanism (connecting/releasing members). The examiner can find no reason to combine or modify the references of record to create applicant's invention without the use of impermissible hindsight.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
